

# EXTEND THE REACH OF EMPLOYEE SELF-SERVICE AND E-RECRUITING WITH KIOSK TECHNOLOGY

## *Realize the Full Potential of Your Employee Self-Service and e-Recruiting Initiatives*

Enterprises are increasingly reaping the benefits of self-service functionality in human resources, through web-based HR applications and corporate intranets. It's an effective way to empower a workforce and save money at the same time. But for employees without desktop computers – in manufacturing plants, healthcare facilities, distribution centers, warehouses, retail outlets and many other work environments – employee self-service remains out of reach. Organizations with large, disconnected workforces are unable to realize the full potential of their investment in self-service HR initiatives.

Increasingly dynamic and geographically dispersed working environments require more effective and more consistent internal communications and personnel processes.

## *The Self-Service HR Kiosk Solution*

DynaTouch can help your organization extend the reach of HR applications and employee services to your entire workforce. Using a carefully integrated system of kiosk hardware and software – with a user-friendly interface, 24x7 reliability and robust security – self-service kiosks are a powerful solution. Allow all workers to gain access to the same human resource information and services. Empower employees to handle their own information and HR needs, resulting in better morale, job satisfaction and efficiency. And, the organization can achieve significant savings and return on investment from lower transaction processing costs, faster cycle times, and reduced data entry, printing, distribution and paper costs.

Evolving compliance and employee morale issues require equal access to Human Resources information and improved communications with unconnected workers.

## *From Hiring to Benefits Administration to Pay Stub Printing*

You can use self-service kiosks and managed workstations to extend virtually any HR self-service application, portal or enterprise intranet – from job postings and hiring to benefits administration, from employee policies and forms to organizational news, from employee training programs to timekeeping and payroll information. And, with a proven, integrated solution from DynaTouch, you can deploy a secure, reliable, cost-effective self-service kiosk capability in record time.

Implement cost-effective processes for hiring, employee communications and benefits administration with self-service kiosk technology.
